PPE Material Bins are strong and durable. They are roto-molded of linear low density polyethylene (heavy wall) and nestled in a strong welded steel frame. All sizes have a probe opening chute angled to the lowest point in the bin to assure continuous material flow. They are opaque in color to allow viewing of the bin contents. They feature a stainless steel slide gate for fast material evacuation, plus the bins can be removed from the frame for cleaning if necessary. Material Bins come complete with lid and casters.
