

# THREAD CLEANING BRUSHES

FOR CLEANING FEMALE THREADS ON:  
NOZZLES • SCREWS • BARRELS • THERMOCOUPLE HOLES • ETC.

## CLEANING BRUSHES

These side action brushes have an almost solid concentration of bristles to clean internal threads or small bores. This concentration of bristles provides a high degree of bristle stiffness with almost no flexing of bristles during operation. The high strength stainless steel shaft can be chucked directly in any power tool chuck or the special holder can be used for greater strength. Bristles are made of high carbon steel or brass.

**STEEL OR BRASS BRISTLES**

## BRUSH HOLDERS

Brush holders are available for all cleaning brush sizes. They reduce bristle extension length from the stem and produce stiffer brushing action while allowing brush to be rotated at higher r.p.m. They also extend the brush length overall to 3 3/8". They contain a set screw to hold the brush in place.
