

SQWINCHER ACTIVITY DRINK

REHYDRATES, RESTORES AND RECHARGES BEFORE AND AFTER DEHYDRATION

47.7 oz.
Powder Pack Concentrates

64 oz.
Liquid Concentrate

- Available in 5 different flavors with 3 different dispensing options.
- No caffeine, low sodium.
- Contains natural flavors.
- Replaces important body salts and fluids lost in hot environments, faster than water.
- Offers better taste, superior composition & optimal balance of electrolytes (lower sodium, higher potassium).
- Restores energy levels.
- Prevents acute or chronic body fluid loss.

THE DRINK THAT KEEPS WORKING MUSCLES WORKING!

Squincher is an electrolyte drink scientifically formulated to replace important body salts and fluids lost through dehydration. It offers a multitude of advantages over its competitors including better taste, superior composition, optimal balance of electrolytes (lower sodium, higher potassium), five different flavors and advanced dispensing options.

While water can quench mouth thirst, it cannot immediately restore body thirst. Dehydration occurs in a variety of forms and depletes muscle cells of electrolytes (important minerals and body fluids) which weaken the cells and keep them from functioning normally. Water is absorbed slowly from the stomach and cannot be retained in the extracellular cavity where dehydration has occurred. Squincher is isotonicly formulated to restore

electrolytes to the muscle cells within seconds of drinking while restoring optimum energy levels in the process.

Squincher has year round applications for prevention of acute or chronic body fluid loss. In addition to extreme climates, dehydration is caused daily through improper diet, caffeine, nicotine, stress, alcohol, drug use and abuse, illness and inclement weather conditions, to name a few.

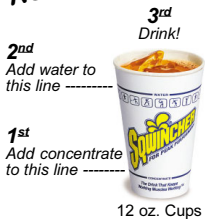

Thirst is not always an indicator when replenishing body fluids. Studies in industry indicate that a person should consume 6 to 10 ounces of Squincher every 12 to 20 minutes in very hot or fatiguing situations. The key is to drink Squincher at regular intervals just as one would incorporate other safety practices at regular intervals in order to be more effective.
