

BUNA-N 70 O-RINGS & HBNR

HIGH-PERFORMANCE MOLDED SEALS

ISO-9002

MANUFACTURED IN A
QUALITY SYSTEM CERTIFIED
FACILITY.

PPE O-rings are Buna-N 70 (nitrile) and are suitable for nearly all sealing applications including valves, cylinders, flanges, faucets, etc. Their efficient resistance to hydraulic fluids, petroleum-based fluids, synthetic lubricants, water, etc. make them the most widely used O-ring. They have good tensile strength & compression set and excellent abrasive resistance.

The standard sizes available from PPE are defined by Aerospace Standard AS568A, *Aerospace Size Standard for O-rings*, a document published by the Society of Automotive Engineers, Inc. (SAE). These sizes are grouped under five cross-sectional diameters (widths).

Two dimensions define the size of an O-ring: its inside diameter (I.D.) and its width (cross-section).

The PPE part numbers are a variation of the Aerospace Standard AS568A numbering system by using the prefix "BN" for Buna-N 70.

Other sizes and materials also available to order, including Viton (Fluorocarbon), Silicone, Ethylene Propylene and Polyacrylate.

Temperature Range:
-35°F to +250°F

Material: Nitrile
(Durometer: Shore A: 70)

Molded in black.

All examples shown below are actual size with 13/16" O.D.
