WATER LINE CONNECTORS
MAKE CHANGES IN A JIFFY

Features
1. Available with or without valves in the coupler. Nonvalved couplers have minimum flow resistance for maximum cooling. Valved couplers shut off automatically upon disconnect. Valved couplers can be used with eithervalved or non-valved nipples. A valved nipple, however, must be used with an “AV” coupler.
2. Nipples are designed to be recessed below mold surfaces to provide more efficient storage of molds and prevent damage to the nipple.
3. Widest choice of end fittings available, including straight, 45° or 90° with standard hose barb or Push-Lok barbs for easy installation.
4. Couplers and nipples are made of corrosion resistant brass and valved couplers or valved nipple have a Viton™O-ring on poppet and Silicone interface seal as standard for use with water glycol (anti-freeze) type fluids commonly used in heat transfer systems.

COLOR:   SILICONE SEALS = ORANGE,      VITON = BLACK
