STATICIDE® ANTI-STATIC SPRAY
PROVEN EFFECTIVE IN ELIMINATING
STATIC RELATED PROBLEMS

TWO FORMULAS - TWO READY TO USE CONCENTRATIONS
1. GENERAL PURPOSE STATICIDE: For nonporous surfaces (diluted 1:99)
2. HEAVY DUTY STATICIDE: For porous surfaces (diluted 1:39)

- The key component in any total environmental static control program.
- Meets MIL-B-81705 and NFPA-56A electrostatic decay criteria.
- Easy, inexpensive to use and long-lasting.
- Effective on virtually any material.
- Can be applied as spray, wipe, dip, or by transfer roller coating, gravure coating, or flexographic printing.
- Nontoxic, nonflammable, safe to use.
- Non-staining, completely biodegradable.
- Effective on carpeting and tile floors.

- Effective in PC board solder fault reduction programs.
- Meets the requirements for topical antistats as listed in Military Handbook DOD-HDBK-263.
- Proven effective in relative humidities below 15%.
- Used in highly sensitive electronic and EDP operations.
- Proven effective in eliminating EDP field service problems
- Specified by many industrial users.
- Effective in all office environments where electronic equipment is located.

These are some of the typical problems caused by static...

The attraction of dirt, dust, and bacteria to all environmental surfaces, as well as to products and product packages. Damage or destruction of sensitive electronic components and sub-assemblies during manufacturing, testing, packaging, shipping or receiving.

Data processing equipment memory loss, pre-triggering, changes in function, data errors, paper jams, and other "glitches." Charge generation on surfaces of tote boxes and carriers used to process and store electronic components and/or inhibit conductivity.

Also removes residues which can contaminate electronic components and/or inhibit conductivity. Jamming or slipping of paper, plastics or other materials during printing, packaging or converting. Ignition of combustible vapors, dust, or solvents, causing fire or explosion.

Irregularities caused by static in quality printing, heat sealing, silk screening, lamination, and other special applications. Work benches and production surfaces in electronic manufacturing and repair facilities will triboelectric charge electronic components, assemblies, or their handling containers in contact and separation with a surface thereby creating a discharge.
