

EXTRUDED ALUMINUM PROFILES FOR BUILDING END OF ARM FRAMES

EXTRUDED ALUMINUM PROFILES are ideal for building custom robot end of arm tooling frames. The lightweight anodized aluminum extrusions are available in a variety of different sizes and shapes.

Vibration Proof design, all T-slotted structural extrusions have a drop lock feature - a 2° decline on the T-slot flange. This drop lock acts as a lockwasher in that it spring loads the fastener as it's tightened.

The extrusions are 6105-T5 aluminum, Etch and Clear Anodize #204-R1 with a depth of .0004". Yield strength 35,000 lbs/sq in, tensile strength 38,000 lbs/sq in, conforms to Din 17 615 specifications.
