

INSTRUCTIONS

FOR

DOUBLE DRUM TUMBLER

MODEL NO.

DTS-5502

SERIAL NO.

PPE Drum Tumblers are manufactured and sold direct by Plastic Process Equipment, Inc. We are not associated with any other manufacturer except Budget Molder's Supply, Inc. Always specify genuine PPE or Budget Machinery! Do not accept substitutes.

Made in the U.S.A. by Plastic Process Equipment, Inc. © copyright 2006

Thank you for buying a Drum Tumbler from Plastic Process Equipment, Inc. These instructions are intended as a guide for your new product. If you have any additional questions, contact PPE at 800-321-0562.

RECEIVING & INSTALLATION

Please thoroughly inspect your tumbler and report any damage to the motor freight carrier before uncrating for set-up. Select a suitable location away from all traffic, preferably close to a stationary wall. Position your tumbler to allow for easy access for loading and unloading drum holders.

OSHA SAFETY

Fasten your tumbler base securely to the floor with the lag bolts provided. This must be done to avoid tipping or walking of the machine. The drum tumbler must be installed in a safety enclosure to keep all personnel away from the tumbling machine during operation. Mount start-stop switch or PPE control panel outside enclosure and preferably in a remote location. Keep drum safety chain fastened while tumbling drum.

DRUM CAPACITY

DANGER, stay within the recommended drum weight capacity 300 lbs **PER DRUM!** Overloading drums will cause premature wear on gears, shafts, bearings, and motor increasing the risk of damaging the machine. It will also negatively affect your color blending due to reduced head space.

UNBALANCED LOADS

DANGER, never load and tumble one drum on a double drum tumbler. Unequal loads will cause unequal strain on the tumbler components such as gears, bearings, shafts, and motor. Always tumble with a balanced load in both drums.

ELECTRICAL

All tumblers are prewired and tested prior to shipping. Wire units for the voltage in your plant per the wiring diagram located on the motor. We insist you mount your motor starter and fused disconnect in a suitable location away from the tumbler which will allow complete control without approaching the machine. A complete drum tumbler control panel is available from PPE. Part #DTCP-1230 (230 volt) or Part #DTCP-1460 (460 volt).

LUBRICATION: DRIVE GEARS

All PPE tumbler drive gears are lubricated, operated, and inspected at our factory prior to shipment. We recommend using MOLY 29 OPEN GEAR COMPOUND for the drive gear. To apply lubrication, make sure the drum tumbler is turned off, then remove the drive gear guard and apply the necessary amount of gear compound to cover the face of the gear teeth evenly (DONOT UNDER ANY CIRCUMSTANCES APPLY THE LUBRICATION TO THE GEARS WHILE OPERATING THE DRUM TUMBLER). Replace the gear drive guard and your ready to continue using your PPE drum tumbler. Lubrication of drive gears should be performed every four to six months or as needed depending on your operating conditions.

PILLOW BLOCK BEARINGS

The pillow block bearings are lubricated at our factory prior to shipment. For future lubrication refer to the guide below. When lubricating the pillow block bearings add some grease to each bearing, then turn on the drum tumbler (from outside the safety enclosure) and let it run for 15 to 20 seconds. Turn the tumbler off and after it has stopped, add more grease to each bearing. Turn the drum tumbler on again and let run for 15 to 20 seconds. Repeat this process of adding grease & turning on the tumbler until grease begins to come out of the seals. The bearings will now contain the correct amount of lubricant. **REMEMBER: NEVER OPERATE THE TUMBLER UNLESS ALL PERSONNEL ARE OUTSIDE THE SAFETY ENCLOSURE.**

OPERATING CONDITIONS	BEARING TEMPERATURE	GREASE INTERVAL	RECOMMENDED GREASE OR EQUIVALENT
CLEAN	32°F TO 120°F	6 TO 12 MONTHS	SHELL ALVANIA #2 TEXACO MULTIFAK #2
	120°F TO 150°F	1 TO 3 MONTHS	
	150°F TO 200°F	1 TO 4 WEEKS	
DIRTY	32°F TO 150°F	1 TO 4 WEEKS	SUN PRESTIGE #41 HUMBLE L 100K #2
	150°F TO 200°F	DAILY - 1 WEEK	
MOISTURE	32°F TO 200°F	DAILY - 1 WEEK	SINCLAIR LITHOLINE MULTIPURPOSE

LUBRICATION: WORM GEAR REDUCERS

For normal operating conditions where surrounding temperatures are within the limits of 50°F to 120°F, we recommend the use of AMGA Lubricant #8 Comp, 8EP, or similar oil of equal viscosity and composition. Below 50°F, the oil recommended is AMGA Lubricant #7 Comp, 7EP.

The maximum efficiency of worm gear reducers is obtained after a "Run-In" period. The length of time required will depend on the load applied. At full rated load, the "Run-In" period will take approximately 24 hours. At reduced loads this time will increase considerably. Overloading the unit will not decrease the "Run-In" period and may cause damage to internal components. During the "Run-In" period, higher than normal current consumption and temperatures can be expected, as well as lower efficiency and output torque.

Keep oil filled to proper level (do not over fill). After the first 500 hours or 4 weeks of operation, and after each succeeding 2500 hours or every 6 months of operation (which ever occurs first), drain the oil, flush out the case, and refill to the proper level using the recommended oil or equivalent.

CAUTION

Both primary and secondary reducers have individual oil reservoirs. Each unit must be filled to, and maintained at its individual oil level. See below for listing of typical manufacturer's worm and worm gear reducer oils meeting AGMA standards 250.04 Sept. 1981.

WARRANTY

All PPE machinery is warranted to be free of defective material and workmanship for a minimum period of 1 YEAR from date of sale. Some machinery components may carry longer warranties per our suppliers policies, which are passed on to our customers. (i.e., our drier compressors, conveyor motors, etc.)

SPECIFICATIONS:

Motor-right angle gear head type,
1750 RPM x 60:1 29.1 RPM output shaft T.E.N.V.
2 HP 230/460/60/3 6.2amps @ 230V
3.1amps @ 460V
Tumbling speed - 22.6 RPM
Bearings - 2 1/4" Pillow block ball bearings
Floor space required with drums in holders:
113" wide x 70" deep
Gross weight 1262 lbs.

CAUTION:

DO NOT OPERATE THIS MACHINE WITH THE HAND WHEEL COMPLETELY UNSCREWED. THIS MAY RESULT IN THE HAND WHEEL HITTING THE FLOOR, DAMAGING THE TUMBLER AND/OR INJURING THE OPERATOR. IT IS RECOMMENDED YOU INSTALL A SAFETY ENCLOSURE AROUND YOUR UNIT TO AVOID POSSIBLE ACCIDENTS FROM THE ROTATING DRUM HOLDERS.
