## Certificate of Compatibility

Paratherm NF is an extensively purified, water white organic hydrocarbon-based heat transfer fluid formulated to far surpass all industry standards. Paratherm NF is fully compatible with Multitherm PG-1 heat transfer fluid and can be directly added to any closed-loop, liquid phase heat transfer system containing that product. This holds true for both full replacement and top-off situations.

Existing gaskets and pump seals will not be affected as a result of mixing the two products in any ratio. Likewise, there will be no chemical reactions due to the direct mixing of the Paratherm NF with Multitherm PG-1; temperature dependent or otherwise. We strongly recommend a professional analysis of any existing used fluid to determine the level of degradation/contamination prior to making any fluid changes.

Please feel free to contact me directly if you have any questions or concerns.

Best Regards,

Ryan Ritz
