SPHAG SORB ENVIRONMENTALLY SAFE INDUSTRIAL ABSORBENT

SPHAG SORB is a super absorbent organic compound that is used to clean up oil, gas, diesel fuel, solvents, paints, glycol and organic chemical spills. Peat is partially fossilized plant matter (mostly hemicelluloses, cellulose, and lignin) that is formed in poorly oxygenated wetlands where the rate of accumulation of plant matter is greater than that of decomposition. Peat is a highly porous material with a porosity of approximately 95% and a large specific surface area, which gives it a greater absorption capacity than other common absorbents.

SPHAG SORB is:

- Cost Effective
- Versatile
- Easy to use
- Environmentally Responsible

Natural Peat absorbent.
Compared with clay, SPHAG SORB is:

- 10 times more absorbent.
- Lightweight.
- Safe and nontoxic since it contains no silica.
- Nonleaching.
- More suited for landfilling and incineration. Triple screened and dried to a 6 to 8% moisture content which makes it a more effective product than competing brands.
